LET'S GET STARTED!

NYC Taxi

Revenue Analytics

Our clients, a NYC-based transportation company are looking to gain deep insights into the operational performance of their taxi services. They wish to assess key business metrics such as total revenue, number of trips, and passenger count, segmented by payment method and vendor. Additionally, identifying the boroughs (pickup and dropoff locations) with the highest trip volumes will provide geographic insights for strategic decision-making.

Data Source

The project involves downloading [NYC taxi data](#) in parquet format. We also utilized a taxi zone lookup table (contains information about the locations) for enhanced data processing and analysis. The information in the parquet files is summarized further within the [data dictionary](#).

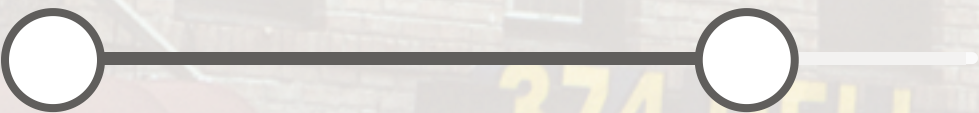

Objectives:

- 🚕 Analyze total revenue, number of trips and passenger count segmented by payment method and vendor
- 🚕 Identify pickup and dropoff boroughs with the highest trip volumes
- 🚕 Track daily revenue trends by date and payment method
- 🚕 Build a secure and scalable pipeline for monthly parquet data ingestion
- 🚕 Create an optimized and interactive Power BI dashboard for monitoring key performance indicators (KPIs)
